(760)846-6814; a12n@mac.com

## Objective

Seeking a full time software engineering position to gain experience and utilize my knowledge of physics, CS, and calculus based maths.

## Education

University California Riverside

Sept 2013-June 2017

Bachelor of Science in Computer Science

## Experience

Tyler Technologies

Sept 2018-Current

*Senior Software Engineer*

- Lead several recurring team meetings including scrum and retro. I take pride in my ability to bring our team together
- Taken the lead on several large scale projects
- Work closely with clients, our product managers, and other product teams (in the case of integrations) to deliver features to client expectations in a timely manner
- Taught support reps SQL and enabled them to complete basic common data fixes, saving 100 dev days of work a year

Thales USA

July 2017-Aug 2018

*Software Engineer*

- Troubleshooted and identified systems issues in the lab prior to them being fielded
- Helped train and develop the Customer IVV and GIIV teams to ensure a better understanding of our system
- Created automation scripts to help Customer IVV with stress testing and bug finding

Northrop Grumman

June-Sept 2015

*Software Design and Programming Intern*

- Used Blender to model and render pieces of the scene for use in simulations
- Worked in C++ and Visual Studio to develop a simulation plugin that utilized IEEE DIS
- Performed software regression testing to ensure requirements were met

Software Consultant

June 2011-June 2015

*Software Design and Programmer*

- Actively recruited and worked with customers to define software requirements. Delivered software that exceeded expectations in a timely manner
- Designed and programmed an Objective-C app to manage accounts for both locations of La Costa Kids
- Designed and programmed a Python application to manage the FPAP football pool: catalogue players choices into an excel sheet and later check them against the winning teams pulled from NFL.com

Northrop Grumman

June-Sept 2014

*Software Design and Programming Intern*

- Worked within a team of systems engineers to develop software requirements to meet customer needs
- Created interactive JavaFX GUI that interfaces with a SQL database to support air vehicle management

Scripps Research Institute

May-Aug 2013

*Software Design and Programming Intern*

- Wrote GUI code to support medical research applications
- Designed molecular structures for use in 3D printing to be utilized for educational outreach
- Assembled work stations to support lab growth

## Projects

"Space Maze" Game

Jan-Mar 2016

- Constructed a game using an Arduino, Atmega1284, joystick, 16x32 LED Matrix and dual speaker system
- A quick demo can be found at <https://youtu.be/efGDMYA2zpI>

"Melody Matcher" Game

Jan-Mar 2015

- Worked in HTML, JavaScript and CSS with another CS student to build a musical educational Web App
- The repository (with a link to the Web App) can be found at <https://github.com/MiaoXiao/Melody-Matcher>

## Skills

- Software Language Skills: C/C++, C#, Python, Bash, Java and Objective-C

# Stanley Ari Cohen

514 Kristen Court, Encinitas, CA 92024

(760)846-6814; a12n@mac.com

- Rational approach to problems with the ability to break down complex procedures into multiple tasks which can then easily be assigned algorithms
- Excellent communications skills both written and verbal
