Skills

- **Software Languages:** C#, C/C++, Python, SQL, Typescript, HTML, CSS, Bash
- **Frameworks:** .NET, Entity Framework, NUnit, IdeaBlade, Infragistics
- **Tools & More:** Agile methodology, Git, Mercurial SCM, RESTful APIs, Postman, JIRA

Experience

Tyler Technologies

Mar 2024 – Current

Senior Software Engineer

- Lead development on several contracts resulting in >\$700K of company profit.
- Win the internal hackathon (with >70 entrants) three years in a row with the projects going on to be implemented in production, preventing several potentially critical bugs and saving our support teams 100+ hours annually.
- Develop and support an internal tool to simplify data entry for support cases that is used by 17 teams, saving developers >100 hours annually. Collaborate across teams to continue supporting and enhancing the tool to maximize gains.
- Manage a team of four developers, working with them to grow and advance their careers.
- Work with Product and Support to understand client deadlines and ensure work is planned properly.

Tyler Technologies

Sept 2018 – Mar 2024

Software Engineer

- Managed >40% of our support ticket queue and was a top contributor within a 5-person team two years in a row.
- Resolved 260 critical tickets preventing clients from using major features.
- Adhere to the Test Driven Development (TDD) paradigm, creating and maintaining >1000 unit tests with more than 20 bugs caught before being released to production.
- Trained support representatives in SQL to perform routine data fixes independently, reducing reliance on developers and saving ~800 hours of engineering time annually.
- Facilitated team scrum and retrospective meetings for 13-person development team, promoting open communication and a collaborative environment that fosters trust, engagement, and high performance.
- Delivered on seven large-scale projects through being able to collaborate across multiple internal teams to coordinate and integrate efforts. Ensure seamless communication, alignment of goals, and on-time delivery of key milestones.

Thales USA

July 2017 – Aug 2018

Software Engineer

- Troubleshooted and identified systems issues in the lab, proactively resulting in >125 issues being resolved before release
- Trained and developed 5 QA teams to ensure a better understanding of our system.
- Developed automation scripts in Bash and C++ to stress test systems, reducing QA time by 15 hours per installation.

La Costa Kids

June 2011 – June 2015

Software Consultant

- Designed and implemented an Objective-C infrastructure solution to manage >30K transactions and >5K customers' information across 2 physical store locations, saving cashiers >100 hours per year looking up and entering transactions.
- Simplified customer interaction required for new transactions, allowing for shorter wait times and lines in-store.
- Built an Angular cloud dashboard that provided data insight into benchmarking marketing trends and simplified annual tax reporting.

FPAP Football Pool

June 2011 – June 2015

Software Consultant

- Designed and implemented a Python solution to manage manage players' betting choices and check them against live scores on NFL.com, saving the pool manager >10 hours per week and eliminating 100% of data entry errors.
- Maintained the system to scale as player pools grew and NFL data formats changed, ensuring quick and accurate results.

Education

University California Riverside
Bachelor of Science in Computer Science

Sept 2013 – June 2017
